EXPERIENCES AND PROJECTS

Ft_transcendence

This project is a onepage fullstack website where you can play pong with players among other things such as JWT / 2fa authentication, a chat, private messages, friends list, profiles, a match-making system, a spectating system and modifications to the pong game such as different background and gamemodes.

(technologies: NextJS, NestJS and PostgreSQL)

Ft_IRC (C++ 98)

This project is about creating an IRC (Internet Relay Chat) server. We used an actual IRC client to connect to our server and test it. It is mainly used for group discussion in chat rooms called "channels" although it supports private messages between two users, data transfer, and various client-side commands.

Inception

The project's objective is to configure a compact infrastructure by integrating WordPress with a LEMP Stack (Nginx, MariaDB, PHP) through Docker and Docker-Compose.

Frontend Intern (3 months)

During my remote internship in WebMastry (a startup that help companies to build their businesses through the detailed development and launch of their business website).

I worked with a high-performance team in a Football Stadiums reservation website, I learnt how to work with components, styled components, hooks... in react, and the daily standup with the team give me the ability to talk, share ideas, and complete tasks in a specific time.
